In other words, I'd rather be a well paid applied mathematician in industry than a poor, mediocre pure mathematician at a low end university. The problem is it seems that most of the applied jobs out there are all about analysis / continuous mathematics, and I am firmly in the algebra / discrete camp.

Abstract algebra is no less applied with many timely problems springing up in computer science, operations research, and mathematics. The development of computer algebra systems has revolutionized the field, making it possible for researchers to tackle problems that were considered intractable just a short time ago.
