A waste-to-energy plant is a waste management facility that combusts wastes to produce electricity. This type of power plant is sometimes called a trash-to-energy, municipal waste incineration, energy recovery, or resource recovery plant. Modern waste-to-energy plants are very different from the trash incinerators that were commonly used until a few decades ago.

## **Waste-to-energy plant - Wikipedia**

Power management supplies control how electrical power is distributed and regulated within a facility. Power distribution components join, split, terminate, ground, and configure an electrical system. Circuit breakers and fuses protect against overloads and short circuits. Power meters, supplies, and transformers monitor and regulate power usage.
