## **Cardiovascular System - Gavilan College**

The cardiovascular system has two major divisions: a pulmonary circuit and a systemic circuit. Each circuit begins and ends in heart, and blood travels through these circuits in sequence. The heart is the size of a fist; it is located in the thoracic cavity in the mediastinum, between the lungs and deep to the sternum.

## **LECTURE 2: CARDIOVASCULAR SYSTEM: THE HEART INTRODUCTION**

The cardiovascular system includes: The heart, a muscular pump The blood, a fluid connective tissue The blood vessels, arteries, veins and capillaries Blood flows away from the heart in arteries, to the capillaries and back to the heart in the veins There is a decrease in blood pressure as the blood travels away from the heart Arterial branches of ...

## **Cardiovascular System Summary Notes**

The cardiovascular system can be compared to a muscular pump equipped with one-way valves and a system of large and small plumbing tubes within which the blood travels. Heart Structure and Functions The modest size and weight of the heart give few hints of its incredible strength.
